

Storage instructions

for: silicone stamped parts and silicone round strips

Vers: 1.2 (EN)

Date of revision: 10.09.2019

A) storage regulations

For the storage of our silicone products we recommend the following:

1. Inventory change according to the principle 'first in first out'
2. Storage temperature below 25°C (not below -30°C)
3. relative humidity does not exceed 70%
4. Protection against direct sunlight and UV exposure
5. Avoidance of ozone formation
6. Prevention of harmful effects of certain products and their vapors for example: disinfectants, solvents, etc.
7. Avoidance of negative influences of electric and magnetic fields
8. Tubes and profiles without talc should be loosened regularly to prevent sticking
9. in case of prolonged storage occasional white efflorescence may occur on the silicone surface

B) storage procedures

Storage of the products outdoors is not permitted. Silicone products should be stored separately from other products, especially PVC hoses, in closed, moderately ventilated rooms and on dry surfaces on shelves or storage boxes / drums. In this type of storage, the following points should be noted:

1. Minimum bending radii must not be undercut
2. Bottom products must not be deformed by the weight of the products on them.
3. The protection against rodent infestation is to be guaranteed.

The customer is responsible for examining the products for impairment due to storage prior to commissioning.
